

**Amendments to the Abstract:**

Please amend the Abstract as follow:

- - ~~The present invention relates to an~~ An arrangement for controlling two drive units which interact with one another, one of which ~~consists of~~ includes a hydraulically driven motor (2). ~~This forms part of a hydraulic system in which hydraulic fluid under pressure forms a main flow through a main duct (1) in which the motor is connected.~~ The motor drives a varying load, and one or more valves (6, 7) control the hydraulic fluid flow through the motor ~~on the one hand during operation and on the other hand for starting and stopping of the motor.~~ One of the valves ~~consists of~~ is a flow control valve (7) for flow control of the hydraulic fluid flow through the motor. The second drive unit (37) performs a working movement which, under the action of hydraulic flow ~~under pressure,~~ influences the loading of the motor. The flow of the hydraulic fluid ~~to/from~~ to the second drive unit is controlled in a coordinated way with the control of the flow through the motor.- -
